Cloud Feasibility Report

November 25, 2025

Table of Contents

01 Method of Analysis

02 Cloud Assessment Feasibility Overview

03 Cloud Readiness and Migration Strategies

04 Resource Capacity Planning

05 Capacity Planning for Migration to VMware Solution

06 Dedicated Host & License Capacity Planning

07 Cloud Resources Recommendation

08 Kubernetes Container Recommendation

09 Workload Components Consolidation Recommendation

10 End of Support Advisory for Operating System

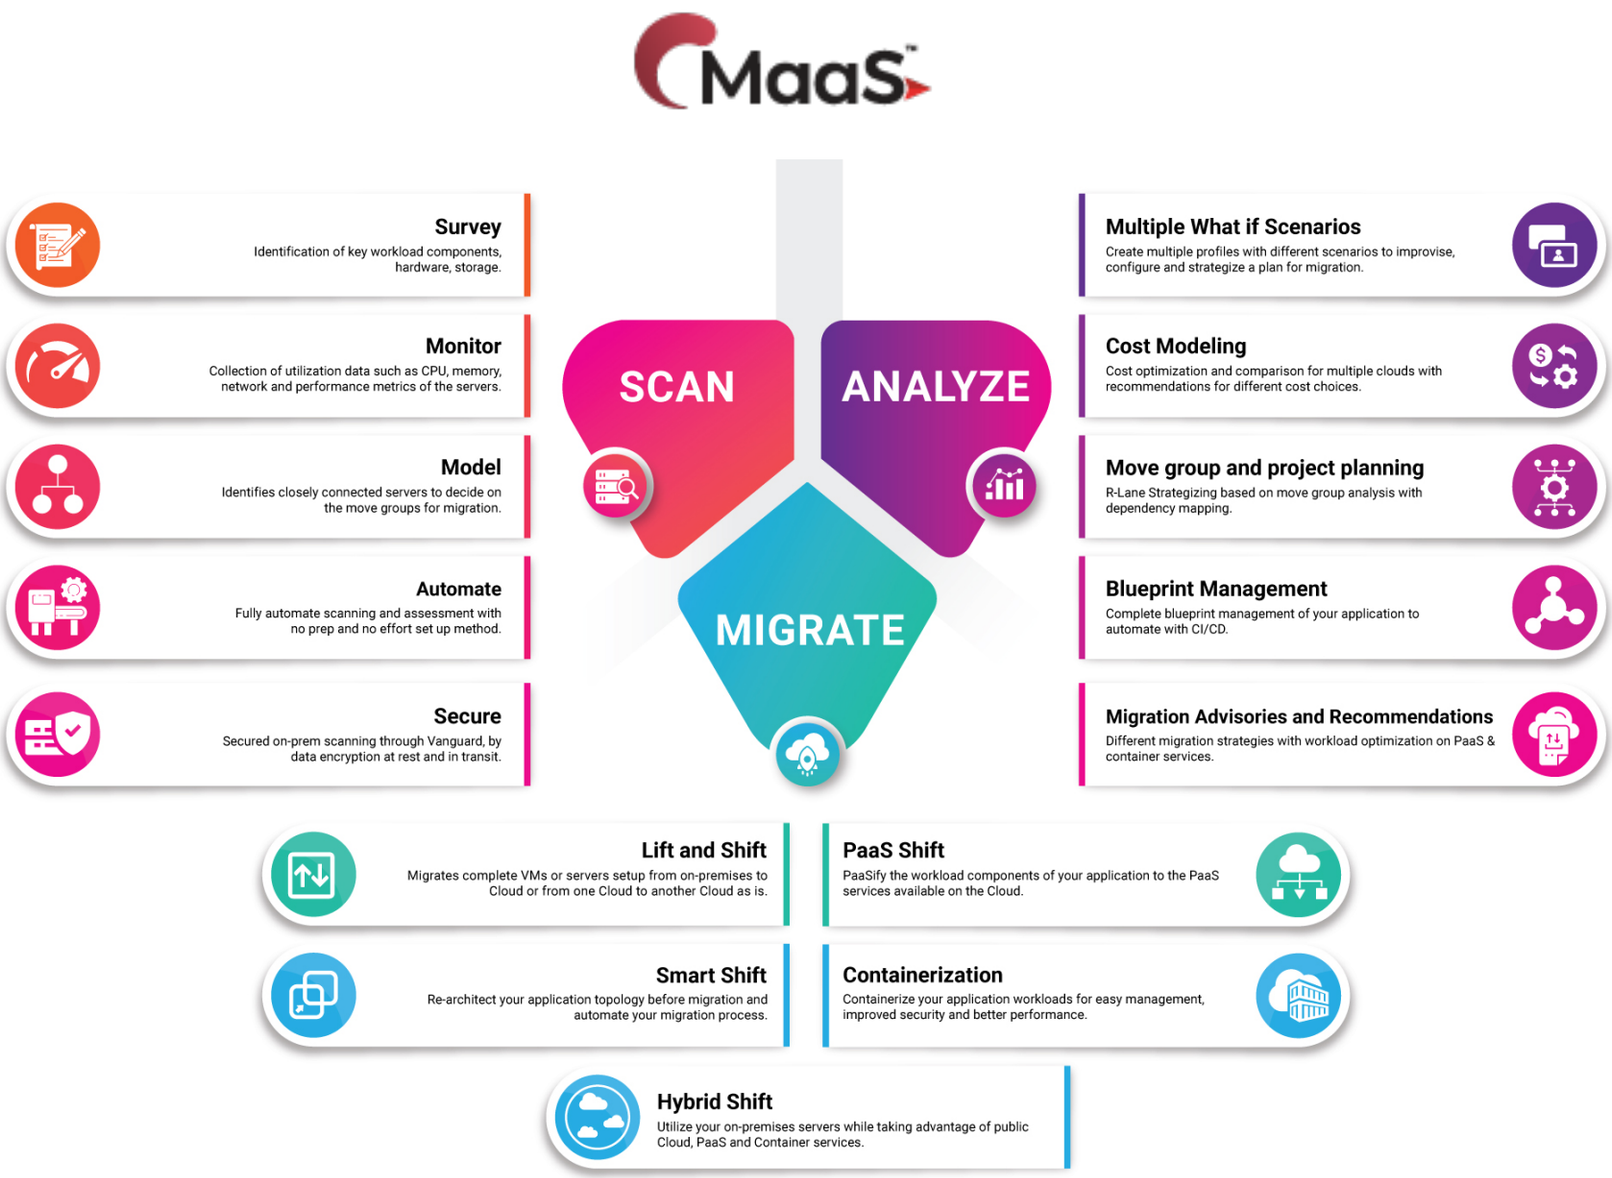
11 End of Support Advisory for Workload

12 PaaS Recommendation

13 Cloud Server Sustainability - Power & CO_2

Method of Analysis

MaaS™ securely scanned your infrastructure using an Agentless, Workload and Extended Scan methods, identifying workload components, services, hardware, storage, and networking details of your servers/VMs. It also collected utilization and performance data for all your servers. MaaS™ then analyzed this information and provided a range of recommendations and advisories, including Migration & Modernization strategies, PaaS services, workload optimization, and cost modeling, to support your cloud migration journey and beyond. These insights offer multiple options to choose the best path for moving to the cloud.



Lift and Shift
Migrates complete VMs or servers setup from on-premises to Cloud or from one Cloud to another Cloud as is.

PaaS Shift
PaaSify the workload components of your application to the PaaS services available on the Cloud.

Smart Shift
Re-architect your application topology before migration and automate your migration process.

Containerization
Containerize your application workloads for easy management, improved security and better performance.

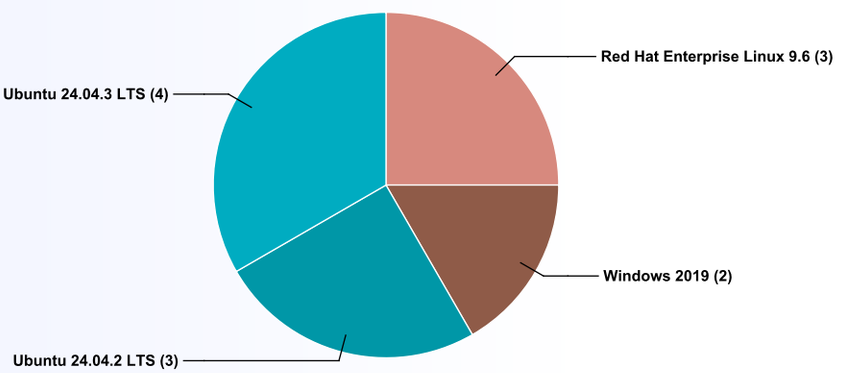
Hybrid Shift
Utilize your on-premises servers while taking advantage of public Cloud, PaaS and Container services.

Cloud Assessment Feasibility Overview

MaaS™ has assessed the viability of your current infrastructure by analyzing compute, storage, network, and software resources based on existing specifications and usage trends. The assessment shows that Cloud Azure East US are feasible options. Recommendations are provided to optimize these resources for enhanced performance and cost-effectiveness.

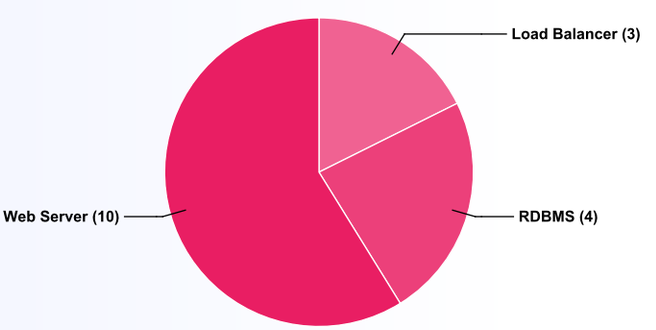
Based on the scan of your current infrastructure, which includes 12 operating systems and server utilization showing 10 underutilized and 2 moderately utilized, MaaS recommends migrating to Azure East US Cloud for its optimal value and cost-effectiveness in managing your servers.

OS DISTRIBUTION



4 Operating Systems

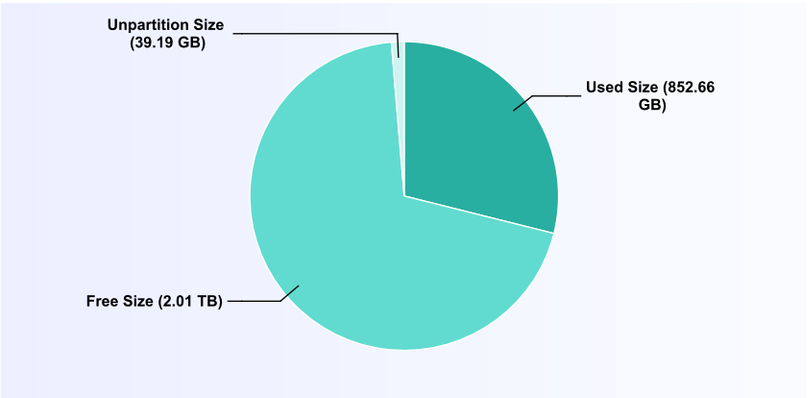
WORKLOAD COMPONENTS DISTRIBUTION



17 Major Workloads Component

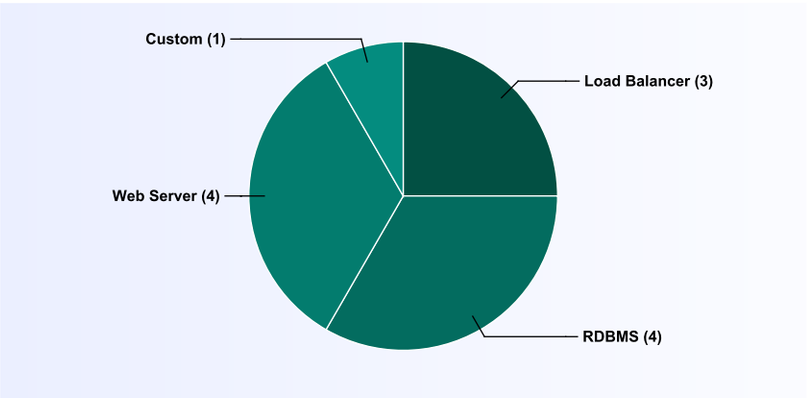
53 Other Workload Components

STORAGE SIZE IN SOURCE



Partition Disk Size 2.84 TB/2.88 TB

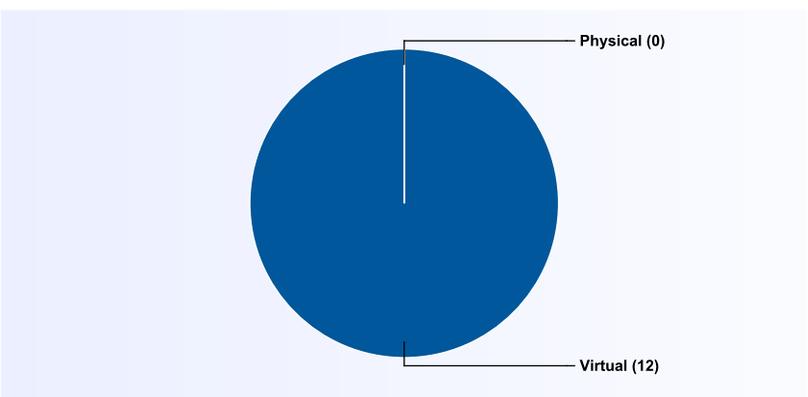
ASSET TYPE



11 Major Workloads Type

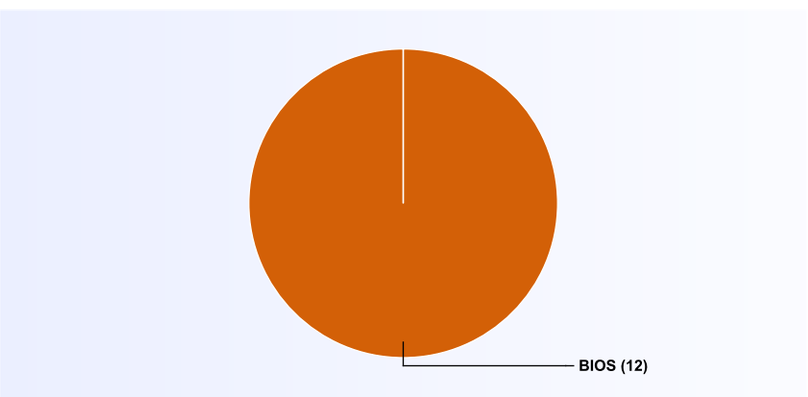
1 Other Workload Types

SERVER TYPE



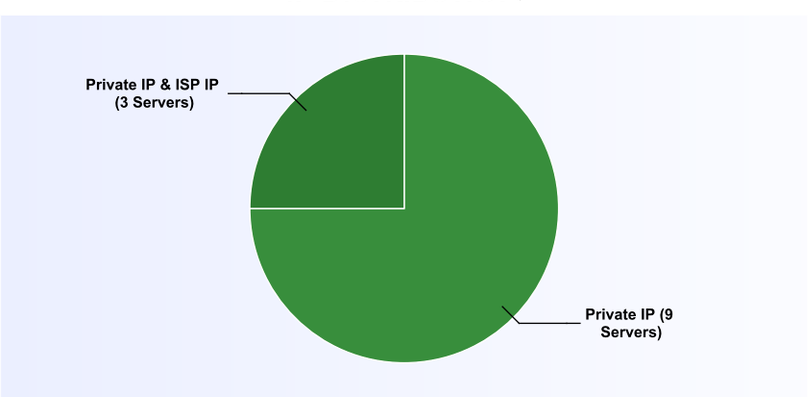
No Physical Servers.

BOOT TYPE



100% BIOS Servers.

IP DISTRIBUTION



25% of Servers assigned with Private IP & ISP IP.

Cloud Readiness and Migration Strategies

Classification of servers Cloud readiness according to different migration strategies, such as Lift and Shift, Smart Shift, and PaaS Shift, as recommended by MaaS™ based on the analysis.

Cloud Readiness Summary

CLOUD READINESS	Azure East US
Cloud Ready Number of servers which can be migrated with no changes.	12/12 Servers
Cloud Ready with additional service efforts Number of servers which can be migrated with additional service efforts such as changing OS/RAM/Architecture/Version in servers.	0/12 Servers

Migration Strategy for Cloud Ready Servers

LIFT AND SHIFT MIGRATION	Azure East US
Lift and Shift Migration Number of servers which can be migrated as-is using Lift and Shift mode.	9/12 Servers
SMART MIGRATION	
Smart Shift Quantifying the migration capacity of servers which can be migrated by restructuring of an existing application to make it cloud-ready without changes or modifications.	3/12 Servers
Smart Shift with service efforts Quantifying the migration capacity of servers which requires an efforts by making changes to the application architecture during the migration process.	0/12 Servers
PAAS MIGRATION	
PaaS Shift Migration Number of servers which can be migrated to Cloud as PaaS service by provisioning and migrating your workload components in Cloud with the help of MaaS™.	8/12 Servers
PaaS Shift Migration with additional service efforts Number of Servers which can be migrated to Cloud as a PaaS Service using MaaS™, by following the approaches/recommendations provided by the Cloud Providers with minimal manual efforts.	0/12 Servers

Resource Capacity Planning

MaaS™ streamlines resource capacity planning on Cloud Azure East US by analyzing server profiles, ensuring an optimal match for migration. Confirm sufficient quota availability on these clouds for provisioning VMs, CPU cores, RAM, disks, and network resources during the migration process.

Azure East US

RESOURCE REQUIREMENTS	EQUIVALENCE MATCH	BEST MATCH
Total No. of Servers	12	12
Total CPU Core	86	40
Total RAM Size	364 GB	96 GB
Total Disk Size	2.84 TB	2.84 TB

CPU Core Group-Based Capacity Comparison Across Cloud Regions

Comparison of server capacity for cloud migration to Azure East US, grouped by CPU core range. Shows resource requirements—server count, total CPU cores, and RAM—based on Equivalence Match and Best Match strategies to aid optimal provisioning and planning across regions.

Azure East US

CONFIGURATION MATCH	CORE TYPE	NO. OF SERVERS	TOTAL CPU CORE	TOTAL RAM
Equivalence Match	Up to 8 core servers	12	86	364 GB
Best Match	Up to 8 core servers	12	40	96 GB

Capacity Planning for Migration to VMware Solution

MaaS™ streamlines resource capacity planning for migrating the servers to VMware, on cloud platforms such as Azure East US and on-premises systems, by analyzing server data within the profile.

This pricing covers VMware licensing costs of NSX-T, vSphere, vSAN, and HCX Advanced.

Azure East US

VMware Solution

CONFIGURATION MATCH	FLAVOR NAME	NO. OF CLUSTER / HOST	TOTAL CPU CORE	TOTAL RAM SIZE	TOTAL STORAGE SIZE	PAY AS YOU GO	1 YEAR RESERVED		3 YEAR RESERVED		5 YEAR RESERVED	
							FULL UPFRONT COST	NO UPFRONT COST	FULL UPFRONT COST	NO UPFRONT COST	FULL UPFRONT COST	NO UPFRONT COST
Equivalence	AV36P	1 / 3	216	2304 GB	62.1 TB	$20148.00	$11405.75	$11405.75	$10008.33	$10008.33	$10008.35	$10008.35
Best	AV36P	1 / 3	216	2304 GB	62.1 TB	$20148.00	$11405.75	$11405.75	$10008.33	$10008.33	$10008.35	$10008.35

Dedicated Host & License Capacity Planning

MaaS™ evaluates the capacity requirements for dedicated cloud hosts by analyzing equivalent compute and storage options across various pricing models. This ensures optimal utilization of resources and cost efficiency. The graph highlights the cost distribution for compute and storage across different reservation plans, enabling informed decisions for workload deployment and budget planning on dedicated cloud infrastructure.

Cloudname: Azure East US Configuration Match: Equivalence

1. Host Name: Host 1

Note:

Operating System License Calculations:

1. Windows Server license is calculated based on both DataCenter and Standard Editions.
2. For RHEL and SUSE license capacity, customers to plan based on their licensing models.
3. Other Linux OS do not require a license.

Database License Calculations:

1. DB license is calculated based on Enterprise Editions.

Cloud Resources Recommendation

MaaS™ recommends suitable cloud resources for servers, offering both Equivalence Match and Best Match options for optimal alignment based on the captured usage trends.

Equivalence Match signifies the exact or closest available flavor in the Cloud, whereas Best Match denotes the most accurate VM sizing based on server utilization.

Compute Recommendation

Review the equivalence and best match flavors suggested by MaaS™ for the scanned source servers with its resource specifications and cost. MaaS™ recommends flavors which is equal to or higher/lower than your existing server configuration. OS licensing cost is also included in the Flavor Cost. Refer OS licensing Cost breakdown in TCO Analysis section for more details.

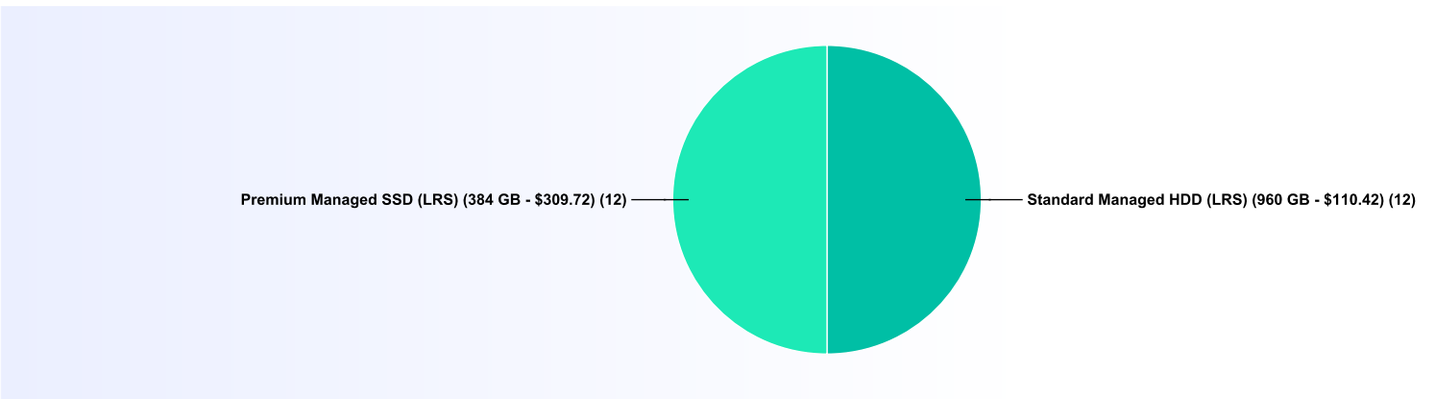
Azure East US: Equivalence Match has been suggested as the Best Match for 2 servers with no utilization data.

Storage Recommendation

MaaS™ has assessed your infrastructure's storage needs, recommending suitable storage types in the cloud based on disk utilization and IOPS/throughput requirements for workload components.

Recommendations align with advisory guidelines from cloud providers for major workload types such as Web/App servers, Database servers, Mail servers, Queue servers, and LDAP servers. Utilizing collected data on total space used across all disks (including OS disks) and any additional storage like NAS or SAN attached to VMs,MaaS™ suggests the appropriate cloud storage options that fit within the storage size limits of the cloud.

STORAGE IN Azure East US

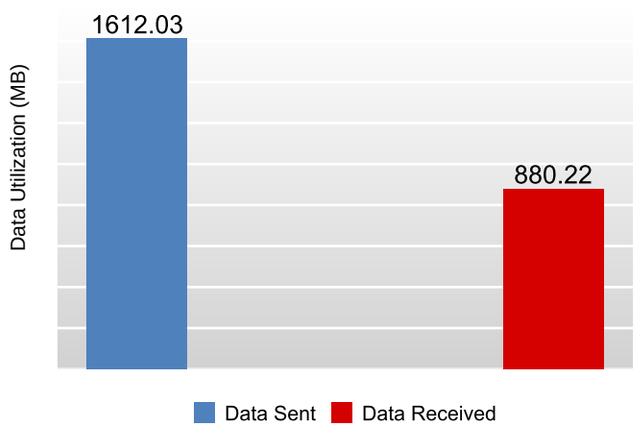


CLOUD NAME	TYPE OF STORAGE	STORAGE SPECIFICATION	NO OF DISK	TOTAL STORAGE	TOTAL PROPOSED STORAGE	TOTAL COST /MONTH
Azure East US	Standard Managed HDD (LRS)	512 GB, 500 IOPS, 60 MB/s	2	800 GB	1 TB	$43.520
	Standard Managed HDD (LRS)	128 GB, 500 IOPS, 60 MB/s	7	900 GB	896 GB	$41.230
	Standard Managed HDD (LRS)	256 GB, 500 IOPS, 60 MB/s	2	400 GB	512 GB	$22.660
	Premium Managed SSD (LRS)	128 GB, 500 IOPS, 100 MB/s	8	1.17 TB	1 TB	$157.680
	Premium Managed SSD (LRS)	256 GB, 1100 IOPS, 125 MB/s	4	800 GB	1 TB	$152.040
	Standard Managed HDD (LRS)	64 GB, 500 IOPS, 60 MB/s	1	50 GB	64 GB	$3.010
	Total		24	4.05 TB	4.44 TB	$420

Network Summary

A summary of network bandwidth requirements for all servers is provided based on utilization data (data sent and received) collected during server scans lasting approximately 15-30 minutes (Extended Scans are also considered). This data encompasses network usage information since the servers were last restarted and will be used to estimate monthly network usage values. With this information, appropriate network bandwidth can be selected on the cloud platform. For more optimized recommendations, please upload utilization data collected over an extended period

SERVERS NETWORK DATA UTILIZATION (MB /Month)



Network Cost Calculation

Azure East US: Data inbound to Azure East US data center is always free.

Note: Network cost shown in the TCO table is calculated considering the data is transferred across different regions.

Kubernetes Container Recommendation

Recommendations are offered for creating Kubernetes services on the preferred cloud for the cluster, along with the Total Cost of Ownership (TCO) for all eligible workloads that can be containerized. MaaS™ has evaluated all containerizable workloads based on standard containers and the capability to create custom containers for custom workloads. Migration of legacy workloads is necessary based on the available container OS or the versions of available workloads.

Workload Components Consolidation Recommendation

Review the detailed workload recommendations based on identified workload components to enhance cost-effectiveness and performance. Migration with suggested workload consolidations necessitates Smart Analysis, utilization of data collected over an extended period for your servers, and Workload Scan for analyzing application complexity, performance, and efficiency.

Workload Consolidation Recommendation

CLOUD NAME	WORKLOAD COMPONENTS NAME	NO. OF SERVERS	NO. OF WORKLOAD COMPONENTS	RECOMMENDATION
Azure East US	MySQL	4	4	Reduce the number of MySQL servers from 4 VMs to1 VMs by sharing it among multiple applications to reduce the server cost.
	ApacheTomcat	4	10	Reduce the number of ApacheTomcat servers from 4 VMs to1 VMs by sharing it among multiple applications to reduce the server cost.
	Total		14

Workload Consolidation to PaaS Recommendation

Based on the recommendation of PaaS Services, MaaS™ advises reducing the number of PaaS services by sharing them among multiple applications to lower overall PaaS costs.

CLOUD NAME	WORKLAOD COMPONENTS NAME (PAAS SERVICE)	NO. OF SERVERS	NO. OF WORKLOAD COMPONENTS	RECOMMENDATION
Azure East US	MySQL (Azure Database for MySQL)	4	4	Reduce the number of MySQL PaaS services from 4 PaaS services to 1 PaaS services by sharing it among multiple applications to reduce the PaaS service cost.
	ApacheTomcat (App Service)	4	10	Reduce the number of ApacheTomcat PaaS services from 4 PaaS services to 1 PaaS services by sharing it among multiple applications to reduce the PaaS service cost.
	Total		14	

PaaS Recommendation Servers

PaaS Recommendation

Each server has been analyzed and possibilities for migrating certain workload components to PaaS services in Cloud has been identified. Appropriate advisories are listed in the below table, suggesting how these can be mapped. Web servers and database servers require deep analysis using MaaS™ Agent-based Scanner to determine the degree of compatibility with Cloud PaaS resources. To improve efficiency, performance and reliability, MaaS™ recommends PaaS services which can be utilized instead of your workload components in Cloud.

CLOUD NAME	SERVER IP	SERVER NAME	SOURCE CONFIGURATION	WORKLOAD COMPONENETS	TYPE	PAAS SERVICE	PAAS CONFIGURATION	PAAS COST /MONTH

Cloud Server Sustainability - Power & CO_2

This assessment provides a comprehensive insight into your cloud server's CO emissions and energy (kW) consumption, based on actual utilization patterns. It offers custom recommendations from VM optimization to rightsizing to help reduce emissions and improve long-term sustainability. Dive into the sections below for a detailed view of your cloud environment's environmental impact.

Azure East US

	Equivalence Match
Servers	12
Power	4986.72 kW/month
CO_2 Emissions	1.88 MT/month
